- First full-time Corporate Influencer in Germany (Horizont)
- TOP 1 most influential LinkedIn Creator Germany (Favikon)
- TOP 3 most influential LinkedIn Creator worldwide (Favikon)
- Influencer of the Year 2023 (Influence! Podcast & Horizont)
- Highest growth rate in Germany, like R. Habeck (Horizont)
- Top 20 LinkedIn Influencer in Germany (LinkedIn Rankings)
- Top 3 women in Germany on LinkedIn (Follower Metrics)

Wie wird man Europas Top-LinkedIn-Influencerin, Lara Bothur?  
Karriere / Patrizia Laeri / 11.12.23

Das macht dich einflussreicher als manchen Politiker:in?  
Ja, in der Tat, wenn ich mir die Wachstumsrate meines LinkedIn-Profiles anschau, liegt diese bei 23 Prozent. Damit erziele ich neben dem deutschen Wirtschaftsminister Robert Habeck die grösste Wachstumsrate im deutschsprachigen Raum.

Der Favikon Top 200 ist jetzt verfügbar  
Dies sind die drei einflussreichsten deutschen Persönlichkeiten auf LinkedIn:  
Lara Sophie Bothur  
Carsten Maschmeyer  
Robert Habeck  
Diese Persönlichkeiten und CreatorInnen führen die Listen in den anspruchsvollsten Kategorien auf LinkedIn an:  
Business & Startups: Carsten Maschmeyer  
Marketing & Sales: Céline Flores Willers  
Careers & HR: Laura Bormann  
Inclusion & Social Impact: Tijen Onaran  
Environment & Green Tech: Nico Rosberg

Growth Rate

By creatively communicating technology content, I reach potential talents, customers and cooperation partners on LinkedIn. I translate between tech experts and business decision-makers to generate new business. I do this not only for Deloitte (7.8 % of my target group), but also for our alliance partners, clients and external companies. I host tech events as a moderator and act as a speaker and panelist on: Tech for Good, Women in Tech and Corporate Influencing. To enable clients to become active on LinkedIn independently, they can also book a LinkedIn workshop with me.

**Goals:** Talents, clients, cooperations

**Job:** C-Suite, Founders, Tech Expert, Business Decision Maker

**Branches:** Corporate Leadership & Management, Financial Services, Technology & IT, Marketing & Sales, Manufacturing & Healthcare

Beauty & tech - does that go together?! Of course! 📌

Last week I attended an event by L'Oréal to learn more about the latest #beautytech developments.

Here's what I was introduced to:

**Refilling cosmetics:**

It's about exploring new ways to reduce waste. Since 2019, the company recovered 97% of its industrial waste by reusing/refilling or recycling it. 58% of this waste was already compromised of recovered materials.

**Personalized skincare consultation:**

This is a digital skin analysis powered by artificial intelligence & based on 6,000 scientific images of women and men with different skin types. Based on this, you get personalized skincare routine tips.

**Beauty for all:**

HAPTA is a handheld, ultra-precise smart #makeup applicator for users with limited hand and arm mobility, offering them the ability to steadily apply lipstick at home.

**Personalized perfume:**

This system, which combines #neuroscience and AI with a polysensory experience, detects five different feel-good emotions triggered by 14 different accords representing 27 fragrances. Through the reactions that are measured, a personalized selection of three fragrances can be filtered.

**Virtual try on of hairstyles:**

This VR #technology allows you to try on different hairstyles and experiment with colors and styles before committing to a new look.

**AI-assisted lipstick color selection:**

With #AI technology it's possible to help find the perfect lipstick shade based on one's skin tone and dress.

Beauty tech may be just one aspect of #innovation impacting #retail, but Deloitte predicts the industry as a whole will see significant change by 2023, driven by technological advances such as AI, retail media (advertising) and the transition to renewable energy.

In my opinion, we should definitely put a special focus on the retail industry as there are still many challenges especially in #sustainability - read more in our Global Powers of Retailing 2023 study, link in my comments!

Let's create a sustainable & innovative retail industry together! 📌❤️

What new technologies have YOU experienced in retail so far?

## LINKEDIN POST

- Event related post (tech event/ company event)
  - including attendance at the event
- Job advertisement
  - connected to a tech topic
- There must always be a Deloitte reference that I connect to your topic (as I'm Voice for Innovation & Corporate Influencer at Deloitte)

# EXAMPLES\*

## Deloitte & HSV drive future technologies! 🏆📱

This Saturday I watched the HSV vs Hertha #football match in Hamburg! Besides the 3:0 victory, there was another win: The talk about NEURO AVATARS!

### What are neuro avatars?

These are uniquely personalized #avatars for each individual based on their specific #neural reactions and #brain activity. A powerful tool with applications in various fields ...

- ✔ **Healthcare:** An avatar in a pain management app adjusting relaxation techniques as it detects changes in brain patterns.
- ✔ **Education:** An avatar tutor altering the difficulty of math problems as it gauges the student's focus.
- ✔ **Entertainment:** A VR story avatar adapting its pace and plot twists based on the user's emotional reactions.
- ✔ **Communication:** An avatar controlling a computer cursor through thought commands for people with motor impairments.
- ✔ **Marketing:** A virtual shopping assistant guiding users based on their brain-registered preferences.

The #HSV Future Dock x Exporo AG is supported by [Deloitte](#) & is a platform for

## Hola from the Smart City Expo in Barcelona with Deloitte! es♥

This morning, I had the opportunity to moderate the [Deloitte #GenAI x #SmartCity](#) panel at the Smart City Expo in Barcelona, where I gained insights into the future of urban living from global leaders.

Here are my favorite #quotes from today:

🗣️ "The future of cities will encapsulate connected, citizen-centric experiences that are both predictive and personalized." - Taimur Khan, SVP Sales Northern Europe at Salesforce

🗣️ "The essence of future cities will revolve around enhancing people's happiness and well-being." - Jean Barroca, Global Public Sector Digital Modernization at Deloitte

🗣️ "Cities of the future will evolve to be smarter, more livable, significantly improved from today, and full of vitality." - Harald Proff, Global Sector Lead Automotive at Deloitte

🗣️ "The future will witness cities becoming profoundly productive, with a tangible, real-world impact on people's lives." - Justin Hermann, Area Vice President & Global Public Sector at ServiceNow

🗣️ "The focus of future cities will be intensively on the quality of life of its citizens, ensuring a safer environment, and harnessing technology for the greater good." - Charbel Aoun, Smart City & Spaces Director EMEA at

\*not the full posting text

# EXAMPLES\*

This will change so many lives! 🗣️

A student at Stanford University has developed an extraordinary pair of **#AI AR #glasses** that can transcribe speech in real-time for deaf people.

This is opening up a whole new world of **#communication!** How else can **#technology** be used to remove barriers and create a more accessible and inclusive world for people with **#disabilities?**

✔️ **Customized AI Exoskeletons:** AI-controlled exoskeletons that adapt to people with restricted mobility, provide personalised support and improve mobility.

✔️ **AI-Powered Smart Glasses:** Smart glasses equipped with AI technology that can describe the surrounding environment to a blind person, including recognizing objects, text, and people's faces.

✔️ **Augmentative & Alternative Communication:** High-tech AAC devices with text-to-speech capabilities that allow individuals to communicate by

Gen AI arrived in Photoshop! ✔️

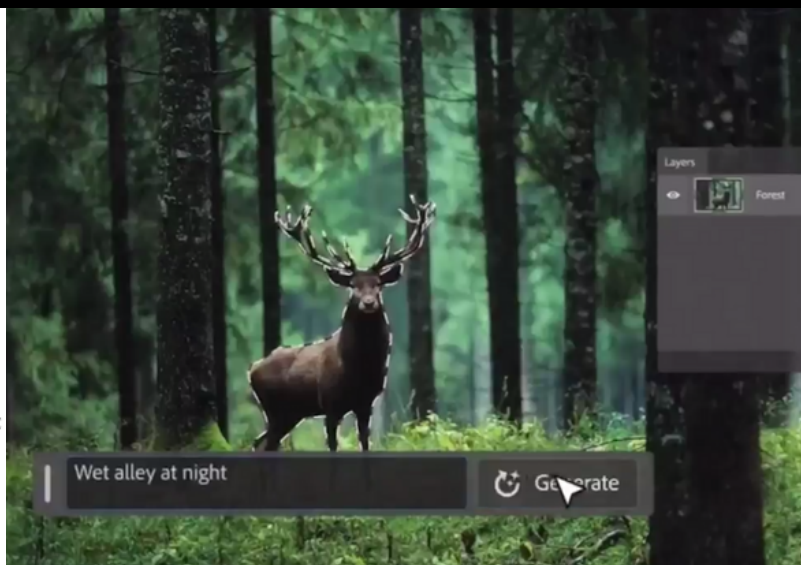

It's incredible what's possible with **#GenAI!** A new era of **#creativity** is arising! But what will actually be possible soon?

Here are some ideas:

-**High-Resolution Image Upscaling:** Enhance low-resolution images to high-resolution without losing quality, ideal for restoring old photographs or improving digital assets.

-**Artistic Style Transfers:** Apply the style of famous artworks or custom styles to any photograph, transforming ordinary images into unique artistic creations.

-**Colorizing Black & White Photos:** Bring historical or old family photos to life by accurately adding color, using AI to interpret and apply realistic

WOW! Learn to play the piano with VR glasses! 🎮🎹

Last week I was in Vienna at Café Central and tried out this VR **#app** from the Austrian Start Up Magic Keys to learn the **#piano** piece Passacaglia. It's fascinating what is already possible with extended reality **#technologies!**

I was wondering what other **#VR** applications will shape our everyday life?

✔️ **Healthcare - Surgical Simulation:** Reduces the risk of surgical errors, enhances surgeons' skills, and ultimately leads to safer surgeries.

✔️ **Education - Immersive Learning:** Increases student engagement by making learning more interactive and memorable.

*\*not the full posting text*

# EXAMPLES\*

This premature baby simulation technology can save lives! 🤖👶

When I was in Vienna, I got to know Simcharacters, a company that creates premature **#baby #simulations** to train **#doctors** or **#nurses**. With this **#training** you can learn how to deal with **#premature** babies and thereby save their lives.

I was wondering what further simulations help save **#lives** in **#medicine**?

- ✓ **Surgical Simulation:** Advanced surgical simulators allow medical students and practicing surgeons to practice procedures in a controlled environment.
- ✓ **Patient Simulators:** High-fidelity patient simulators mimic various medical conditions, enabling students to develop clinical skills.
- ✓ **Virtual Reality (VR) Medical Simulations:** VR applications provide immersive medical scenarios where students can diagnose and treat patients virtually.
- ✓ **Anatomy Simulations:** Virtual anatomy platforms, such as Visible Body, provide interactive 3D models of the human body for in-depth study and exploration.

RTL x Deloitte - new level TV with VR & Gen AI! 🤖📺

Lately, the buzz was all about the **#Metaverse**, now it's **#GenAI**. People are debating whether the Metaverse has faded, but the reality is that both are significant!! Instead of fixating on one, we should explore how **#technologies** can work together harmoniously. That's my learning from the **Deloitte** x Bertelsmann event and Lara Genz's enlightening presentation from our Metaverse Lab.

I now ask myself, what could the **#future** of **#TV** look like with these two technologies?

- ✓ **Personalized VR Cinema:** Imagine stepping into a **#virtual #cinema** where AI tailors a movie or show selection just for you. You'll enjoy this content in a virtual theater, redefining the way you experience entertainment.
- ✓ **Interactive VR Narratives:** Immerse yourself in interactive stories within virtual reality. **#AI** dynamically adapts the story and virtual environment based on your choices, providing a unique and engaging narrative experience.
- ✓ **Immersive Sports Analytics:** Put on a **#VR** headset to watch sports from any angle while AI delivers real-time statistics, highlights, and in-depth game analysis. This combination not only enhances your viewing perspective but also deepens your understanding of the sports you love.
- ✓ **Virtual Social Viewing:** Gather with friends in virtual spaces to watch TV shows or events together. AI analyzes what you're watching and generates conversation topics, keeping discussions lively and relevant, even in a virtual setting.

with Dr. Jan-Niklas Keltsch and 13 others

# EXAMPLES\*

## Future of cooking is AR & AI! 🔍📌

Many everyday tasks, such as **#cooking**, will be optimized by new **#technologies** such as **#augmentedreality** & **#artificialintelligence**! No more recipes, just put on the **#VR** glasses and go!

Since **#AI** is on everyone's lips right now, I was wondering what further technologies can be combined with it to improve our everyday lives?

- ✔ **Internet of Things:** Your AI-guided smart thermostat learns your routine and adjusts your home's temperature, ensuring comfort and energy efficiency.
- ✔ **Blockchain:** AI rapidly detects and prevents fraud in blockchain, securing financial transactions, supply chains, luxury goods authenticity, and academic degrees.
- ✔ **Robotics:** AI-powered manufacturing robots seamlessly switch tasks, collaborate with humans, and predict maintenance, boosting productivity.
- ✔ **Computer Vision:** In self-driving cars, computer vision anticipates and reacts to hazards, enhancing autonomous driving safety.

## Servus from Deloitte Vienna & hello Innovation! 🇦🇹📌

Last week I was in beautiful Vienna and exchanged views with our **Deloitte** Financial Advisory & Risk Advisory colleagues on the latest **#technologies** and what role **#cyber** & **#financialcrime** will play.

**Innovation at speed only works when you share knowledge across countries!** 🌐

In my exchange with the local leaders, I took away a few quotes:

🗨️ The blockchain is everything and nothing - let's see it becomes everything. The most important events in the recent past for me were the merge of Ethereum, the growth of the Lightning network and the work on the Markets in Crypto- Assets (MiCA) regulation. - **Alfred Taudes**, Professor, Institute for Production Management, Research Institute for Cryptoeconomics, WU

🗨️ **#Innovation** is thinking freely - beyond the horizon! Personally, I enjoy engaging with new technologies - learning something new every day. Technological innovation drives change within all areas of Financial & Risk Advisory - as an experienced Leader, I continuously promote these initiatives within my team and our clients. - **Karin Mair**, Managing Partner, Financial Advisory & Risk Advisory

🗨️ Financial & economic crime is a constantly evolving threat and innovation is the key in fighting it. Innovation supported by generative **#AI** and machine learning, combined with human expertise, is required to

Hoi from Deloitte Zurich! CH♥

Last week I was in beautiful Zurich Winter Wonderland for a panel on Gen Z & the future of work. I was especially happy to finally meet & discuss with Yaël Meier, CEO of Gen Z consultancy ZEAM and largest LinkedIn account in Switzerland!

Key learnings from our [Deloitte](#) study on [#GenZ](#):

- ✔ **Be purpose driven** - People aspire to meaning, your organisation's purpose and values need to be clear and at the heart of what you do to attract talent
- ✔ **Embed flexibility into your working practices:** It is critical for Swiss employers to strike the right balance when it comes to key topics such as hybrid working and the holistic workforce ecosystem.
- ✔ **Provide tangible growth opportunities:** There need to be clear opportunities for growth and development. Lack of career development or learning opportunities is one of the main reasons that these generations get itchy feet.
- ✔ **Empower your workforce:** Gen Z and Millennials need to be able to make a tangible impact, be heard and be part of the solution. Ensure your leaders understand the needs of the younger generations in their

## Doctors made a 3d print of an ultrasound for an expecting mother who is blind

### Technology at its finest! 📺

Last week I discovered this amazing [#technology](#) where doctors used [#3D](#) printing to create an ultrasound image for a blind expectant [#mother](#), fostering a unique connection between her and her unborn [#child](#).

What other impactful use cases are there with 3D printing?

- ✔ **Medical Implants & Prosthetics:** A veteran receives a 3D-printed prosthetic limb that allows them to regain mobility and lead a fulfilling life.
- ✔ **Affordable Housing:** A family in a developing country moves into a 3D-printed home that was constructed quickly and at a fraction of the cost of traditional housing.
- ✔ **Disaster Relief:** In the aftermath of a hurricane, relief workers deploy 3D printers to create emergency shelters and critical supplies for displaced survivors.
- ✔ **Education:** Students in a resource-constrained school use 3D-printed educational models to better understand complex science concepts.
- ✔ **Customized Healthcare Tools:** Surgeons use 3D-printed patient-specific tools to perform a complex surgery with greater precision, leading to a faster recovery for the patient.

# EXAMPLES\*

Surgeon in London performing remote operation on a banana in California! 🍌👨‍⚕️

I love this video because it demonstrates what will be possible with Telemedicine in the future! Telemedicine involves the utilization of advanced communication technologies, including high-definition video, secure data transmission, and low-latency connections, to enable skilled surgeons to perform intricate procedures remotely.

In what other areas can #telemedicine be used?

- ✔️ **Appointment Setup:** Patients use apps or websites to schedule virtual visits. For instance, booking an online doctor's appointment to discuss a persistent cough.
- ✔️ **Virtual Consultation:** Patients connect with doctors using secure video or messaging tools. For example, talking to a physician over video to get advice about a minor injury.
- ✔️ **Virtual Assessment:** Doctors can see visible symptoms through video calls. Imagine showing a skin rash to a doctor on screen to get their opinion.

If you have a seat at the table, open the door and let 10 more in! 🗨️  
#WomeninTech

This week I was part of the #equality panel of #Frauen100 with many powerful women! An emotional, impactful evening where I was particularly touched by Düzen and Natalie's speech about women in Iran!

In the #technology field there are still too few women! TIME TO CHANGE!!

But how can you inspire & motivate young women for #tech? According to a study of dpa it's about:

- ✔️ **Hands-On Experiences (65%):** Engaging in practical tech activities is key, as 65% of young women find this motivates them to pursue technology.
- ✔️ **Visible Role Models (62.3%):** With 62.3% motivated by seeing successful women in tech, it's crucial to highlight female role models, especially given their scarcity in the field.
- ✔️ **Specialized Events (45%):** Events like Coding Days or Girls in Tech Days are important, motivating 45% of young women by providing a supportive learning and networking environment.
- ✔️ **Tech Content on Social Media (43.5%):** Sharing relatable, easy-to-understand tech content on social media engages 43.5% of young women, making it a valuable tool for education and #motivation.

# CATEGORIES

## KEYNOTE SPEAKER

### Corporate Influencing:

- Exploring its evolution as a vital communication strategy.
- Highlighting the 'Voice for Innovation' role at Deloitte, its development and measurable impact.

### Generative AI (Gen AI):

- Discussing its influence on work methodologies and emerging trends.
- Addressing the power, use cases, and ethical considerations of Gen AI.

## PANEL-TALK

Speaking on topics like:

**Corporate Influencing:** Insights on leveraging digital platforms for brand awareness and engagement.

**Tech Influencing:** Discussing technology as a change catalyst across industries and integrating tech innovations in business.

**Generative AI (Gen AI):** Exploring the technical and ethical aspects of this emerging technology.

**Women in Tech:** Advocating gender equality in the tech industry, highlighting challenges and opportunities for women.

**Tech for Good:** How technology can drive positive social and environmental change, including sustainable development and social innovation.

# EXAMPLES

## MODERATION

### Event Moderation:

- Smooth event flow and speaker introductions.
- Facilitating Q&A, with a focus on tech and women in tech.

### Panel Moderation:

- Directing balanced, insightful panel discussions.
- Researching panelists' tech and corporate backgrounds.

### Content Preparation:

- Researching relevant themes and audience interests.
- Coordinating discussion points with speakers.

### Pre-Event Alignments:

- Consulting on event objectives with organizers.
- Checking technical setups for smooth execution.

## WORKSHOP

### Corporate Influencing & How to LinkedIn:

#### 1. Definition and Role Development:

- Corporate Influencing: Exploring its significance in business.
- My Role at Deloitte: The evolution and alignment of my role as a corporate influencer.

#### 2. Strategies and Challenges:

- Setting Goals: Defining objectives for networking and brand building.
- LinkedIn's Algorithm: Maximizing visibility and engagement.
- Opportunities and Risks: Balancing growth opportunities with risks like misinformation.

#### 3. Content and Profile Building:

- Creating Posts: Tips for impactful LinkedIn posts with effective storytelling.
- Profile Optimization: Enhancing LinkedIn profiles for professional branding.

AR

Thank you!

Let's exchange on how our collaboration could look like,

Lara
